STUDENT ENGINEERING. INTERNATIONAL COMPETITION.

SPEED THROUGH CODE.

Help UC Irvine students turn autonomous racing research into real performance on the track.

5TH
International finish at an IEEE F1TENTH competition

1:10
Scale of our autonomous racing vehicles

HCB
Fiscal sponsorship through The Hack Foundation

F1TENTH@UCI brings together software, artificial intelligence, electronics, and mechanical design to build cars that navigate and race autonomously. We compete in F1TENTH, now known as RoboRacer.

Our research focuses on reinforcement learning: training driving policies in simulation and bringing them onto real vehicles. We are seeking financial and in-kind sponsors to strengthen our racing platform and give students more opportunities to build, test, and compete.

Let's build the next lap together.
f1tenth@uci.edu f1tenth.club

What your support makes possible.

Our students connect learning algorithms, real-time software, and physical hardware. Sponsorship helps them take ideas through the complete development cycle.

From simulation to the starting line

01 / LEARN In simulation	Reinforcement learning research using PPO and DreamerV3; development in our custom Warporacer simulator and validation in AutoDrive.
02 / BUILD On real hardware	NVIDIA Jetson computing, Hokuyo LiDAR, VESC motor control, and ROS 2, alongside student work in CAD, PCB design, and mechatronics.
03 / TEST On the track	Integrating perception, planning, control, and telemetry to evaluate how simulation-trained driving behaves on physical vehicles.

Funding priorities

Proposed areas for support; we can match a contribution to your interests and our current needs.

Priority	What your contribution would help cover
Hardware & reliability	Sensors, onboard computing, motor controllers, batteries, tires, and replacement parts to keep vehicles available for development.
Simulation & training	GPU or cloud compute and development tools for more training experiments and evaluation before track deployment.
Fabrication & testing	PCB fabrication, mechanical parts, prototyping materials, and track supplies to build, test, and refine designs.
Competition participation	Registration, travel, lodging, and equipment transport to bring students and vehicles to future competitions.

Equipment and technical support

Potential contributions include compatible compute modules, sensors, VESC-compatible components, batteries and chargers, tires, PCB fabrication, machining, and prototyping materials. We also welcome conversations about software access, compute credits, and technical mentorship.

Have equipment to contribute? Contact f1tenth@uci.edu before delivery so we can confirm specifications, quantities, condition, and acceptance through our fiscal sponsor. Goods and services have different tax treatment; see page 4.

Back the students building autonomy.

Support a team working across the complete autonomy stack. Your contribution helps students test their ideas against the demands of a physical race car.

Suggested contribution levels

Draft proposal. Amounts and recognition are suggested starting points for team review. Final recognition and timing will be agreed with each sponsor before a commitment is accepted.

Level	Contribution · USD	Proposed recognition
Supporter	$250–$999	Name acknowledgment on the team website and a season-end impact update.
Partner	$1,000–$2,499	Supporter recognition, with a website logo and a social media thank-you acknowledgment.
Champion	$2,500–$4,999	Partner recognition, plus logo acknowledgment in team presentation materials.
Lead Sponsor	$5,000+	Champion recognition, plus logo placement on a team vehicle or apparel where space and event rules permit.

Contributions of any size are welcome. Recognition for accepted in-kind contributions is arranged individually; recognition levels do not establish a donation's tax value. Logo placement is subject to team approval, available space, applicable rules, and sponsor brand guidelines.

Stay connected to the work

We propose sharing development updates, competition results, and a season-end account of what sponsor support helped make possible. We also welcome conversations with engineers interested in discussing the team's technical work.

Support the next lap.

Whether you can contribute funding, equipment, or technical resources, we would welcome a conversation about supporting our students.

01
Choose a contribution
Financial support, equipment, compute access, or another technical resource.

02
Confirm the details
Discuss the current need, amount or specifications, recognition, and timing.

03
Coordinate with HCB
Contact us for payment instructions or equipment acceptance and documentation.

Start a sponsorship conversation.

f1tenth@uci.edu f1tenth.club

Fiscal sponsorship and donations

F1TENTH@UCI is fiscally sponsored through HCB by **The Hack Foundation (doing business as Hack Club)**, a 501(c)(3) public charity. The fiscal sponsor's EIN is **81-2908499**. Contributions should be coordinated through HCB for the benefit of F1TENTH@UCI. About HCB fiscal sponsorship.

Eligible cash and donated-goods contributions may be tax-deductible to the extent allowed by law. Deductibility depends on the donor's circumstances and any goods or services received in return. The value of donated time or services generally is not deductible as a charitable contribution. Donors determine the value of donated property and are responsible for applicable tax documentation. IRS charitable contribution guidance.

HCB provides emailed receipts for monetary donations processed through its donation system. Noncash acknowledgments describe donated property without assigning its value; we will coordinate the appropriate documentation with our fiscal sponsor. HCB receipts · IRS acknowledgments.
